

Activity Notice: Freeman 3-24 Well Pad

Public should expect activity on well pad and adjoining roads starting week of July 1, 2013

As mentioned at the May 16th Huerfano County Community Forum, the next step for Shell at Freeman 3-24 is to stimulate the well through hydraulic fracturing. This operation will last approximately 10 days.

Hydraulic fracturing at Freeman 3-24 will involve approximately 200 truckloads on or near Highway 69, County Road 520 and County Road 530. As with any on-site operation, operating safely and responsibly is at our core and consistent with Shell's Onshore Operating Principles.

Success of this operation will impact future operations at the Freeman well. Shell will share updated information with the public when appropriate. A call in line for questions or concerns is available at (877) 581-4031 or (303) 305-2122. This line is checked regularly.
